

ZASPiL Nr. 41 – August 2005

**Articulatory correlates of the voicing
contrast in alveolar obstruent
production in German**

Susanne Fuchs

Table of Contents

Chapter 1	Theoretical background	1
1.1.	Phonological feature terms of the voicing contrast and their phonetic correlates	3
1.2.	The voicing contrast - A prime example of phonetic research over at least 50 years	8
1.2.1.	The voicing contrast and the phonetics-phonology interface	8
1.2.2.	The voicing contrast and intrinsic timing in phonetics and phonology	12
1.2.3.	The voicing contrast and the problem of interarticulatory co-ordination	14
1.2.4.	The voicing contrast and the acoustics/perception to articulation relation	16
1.3.	The voicing contrast in German	20
1.3.1.	The phoneme inventory of German consonants	20
1.3.2.	The voicing contrast in different positions	21
1.3.3.	Issues around final devoicing	24
1.4.	Specific aims of the current study	27
Chapter 2	Articulatory correlates of the voicing contrast: state of the art	29
2.1.	Introduction	29
2.2.	Laryngeal correlates	30
2.2.1.	Functional anatomy of the larynx	30
2.2.2.	Laryngeal activity in the voicing contrast	35
2.2.3.	Techniques to investigate laryngeal production mechanisms	41
2.2.4.	Observing glottal opening: a review	44
2.2.5.	Studies investigating single obstruents in German	51
2.2.6.	The occurrence and amplitude of glottal opening	54
2.3.	Laryngeal-oral co-ordination	59
2.3.1.	Aspirated and unaspirated stops	59

2.3.2.	Laryngeal-oral co-ordination and perturbations	61
2.3.3.	Laryngeal-oral co-ordination in fricatives	64
2.4.	Supralaryngeal correlates	66
2.4.1.	Strategies for cavity enlargement	66
2.4.2.	Tongue and jaw movements	73
2.4.3.	Tongue palate contacts	73
Chapter 3	Methods	79
3.1.	Introduction	79
3.2.	Subjects	79
3.3.	Linguistic material	80
3.3.1.	Vowel environment	82
3.3.2.	Nonsense words	82
3.3.3.	Position of the consonants	83
3.4.	Experiment 1: Transillumination, Fiberoptic films, and Electropalatography	85
3.4.1.	Experimental set-up	85
3.4.2.	Postprocessing	87
3.4.3.	Reliability	88
3.4.4.	Fiberoptic films	89
3.5.	Experiment 2: Electromagnetic Articulography and Electropalatography	90
3.5.1.	Experimental set-up	90
3.5.2.	Reliability	92
3.6.	Labelling criteria	93
3.6.1.	Acoustical time landmarks for stops	93
3.6.2.	Acoustical time landmarks for fricatives	96
3.6.3.	Fiberoptic film labelling	97
3.6.4.	EPG time landmarks	97
3.6.5.	Time landmarks for glottal opening	99
3.6.6.	Time landmarks for tongue tip and jaw movement	102
3.6.7.	Statistical procedures	104

Chapter 4	Results	105
4.1.	Results for laryngeal correlates	105
4.1.1.	Introduction	105
4.1.2.	Glottal abduction in stop production	106
4.1.2.1.	The occurrence of glottal abduction in stop production	106
4.1.2.2.	The amount of glottal opening in /t/ production	108
4.1.2.3.	The duration of overall glottal opening in /t/ production	111
4.1.3.	Glottal abduction in fricative production	113
4.1.3.1.	The occurrence of glottal abduction in fricative production	113
4.1.3.2.	The amount of glottal opening in fricative production	114
4.1.3.3.	The overall duration of glottal opening in /z/ and /s/ production	120
4.2.	Results for laryngeal-oral co-ordination	123
4.2.1.	Laryngeal-oral co-ordination in stop production	123
4.2.2.	Laryngeal-oral co-ordination in fricative production	130
4.2.2.1.	Laryngeal-oral co-ordination in phonologically voiced fricatives	130
4.2.2.2.	Laryngeal-oral co-ordination in phonologically voiceless fricatives	134
4.2.2.3.	Quantitative values for laryngeal-oral co-ordination	135
4.3.	Results for supralaryngeal correlates	140
4.3.1.	Introduction	140
4.3.2.	Acoustic vowel duration	140
4.3.3.	Closing gestures	142
4.3.3.1.	Acoustic closure duration	142
4.3.3.2.	Articulatory closing gesture	145
4.3.3.3.	Articulatory closure	151
4.3.3.4.	Articulatory target positions	154
Chapter 5	Discussion	163
5.1.	Linking the results to the hypotheses	163
5.1.1.	The voicing contrast in alveolar stop production	163
5.1.1.1.	Tabulation of results	163

5.1.1.2.	Glottal opening: a laryngeal correlate of the voicing contrast in German?	165
5.1.1.3.	Supralaryngeal correlates of the voicing contrast in German	167
5.1.1.4.	Can supralaryngeal correlates compensate for the lack of laryngeal adjustment?	171
5.1.1.5.	Final devoicing in German	172
5.1.2.	Voicing contrast in alveolar fricatives	173
5.1.2.1.	Glottal opening in phonologically voiced versus voiceless fricatives	173
5.1.2.2.	Supralaryngeal correlates in phonologically voiced versus voiceless fricatives	175
5.2.	Limitations of the current work	176
5.2.1.	Technical limitations	176
5.2.2.	Limitations due to the chosen speech material	177
5.2.3.	Other limits	177
5.3.	Understanding the voicing contrast in German	179
5.3.1.	Some general methodological remarks	179
5.3.2.	Which phonological feature terms reflect the realisation of the voicing contrast in German properly?	180
5.3.3.	Voicing contrast in German and stress effects: Implications for models of stress	182
5.4.	The voicing contrast and its links to different theoretical concepts	184
5.4.1.	The phonetics-phonology interface	184
5.4.2.	The role of timing and its possible control	185
5.4.3.	The stability of interarticulatory co-ordination	187
Chapter 6	Summary, conclusion, and perspectives	189
